HTML | CSS | Python | JavaScript.

EDUCATION

Indus University, Karachi, Sindh

Bachelors in computer science - 2022

Green House Grammar School, College, Karachi, Sindh

Intermediate - 2017

COMMUNICATION

English | Urdu

FINAL YEAR PROJECT

We made a drone which is controlled by voice, hand gestures and controller with enhanced range and better stability by which it doesn't get out of control in wind and can be controlled in many ways if any one function is not available.

We came up with the idea to control it using a camera, voice and by controller. Through camera we gave UAV input by hand gestures and can change direction positions and left and right.

And we implement voice recognition to control it if it goes out of range from camera detection and from controller, so we give it command to come near to range so we can get our controls back.
